

# CUSTOM BUILDS

Model Shown: Dual Engine

Reefer management shouldn't mean fitting your operation around the limitations of a standard generator. Power Pool Plus believes in providing reefer power solutions that fit within your existing operation; maximizing efficiency and saving you money.

All of our custom designed machines are built with the same focus on craftsmanship and attention to detail as our standard product offerings.

### UN-MANNED BARGE APPLICATION

Power Pool Plus has the experience of building power packs capable of navigating long distances between ports of call. Our dual-engine power packs are a proven design that offer trusted engine fail-over switching for peace-of-mind assurance that your perishable cargo will arrive safely.

### AUXILIARY POWER CAPABLE

When utility ground power is unavailable due to natural or man-made events, power packs provide a versatile power solution, but only when properly equipped. Exterior or interior mounted connections alongside reefer plug receptacles will ensure your operation is ready for anything.

### HIGH PLUG-COUNT MACHINES

Power packs capable of handling high numbers of reefers can be achieved through unique design enhancements.

- Receptacle panels on sides or end frames to spread the load
- Custom fuel tank designs and capacities
- Breaker connections to remote receptacle trees
- Unique louver placement & design to address special applications
- On-board storage racks for remote 8-plug trees and cables
- Dual engines with fail-over switch gear

### COMPLETE REEFER YARD DESIGN PLANNING

Imagine turning an empty yard with no infrastructure into a profitable reefer cargo operation in a fraction of the time and cost of new construction.

We've helped others. We can help you.

Power Pool Plus has years of experience in accommodating expansive reefer yard projects requiring massive layouts spanning over 500-ft from a single power source and applications to power 350+ refrigerated loads.
