

# POWER MODULES

TAKE YOUR REEFER YARD  
TO THE MAX

Model Shown: PP-400MAX  
Featuring: (2) 20-Gang Power Outlet Trees  
(2) Sets of 50-ft Power Cables

Imagine a Power Pack that fits neatly into your existing reefer yard design without disrupting the workflow of the entire operation.

## INTRODUCING THE PP400MAX

This versatile solution affords reefer operators greater flexibility without sacrificing workflow efficiencies.

The PP400MAX allows for the safe placement of remote receptacle trees where they are best needed, freeing the operator to maximize yard layouts by spreading the load away from the power source and maximizing space.

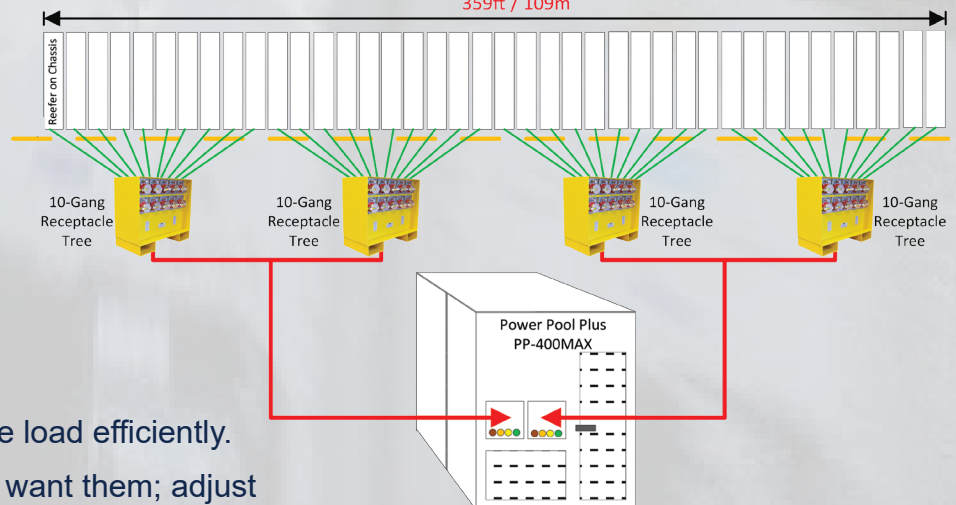

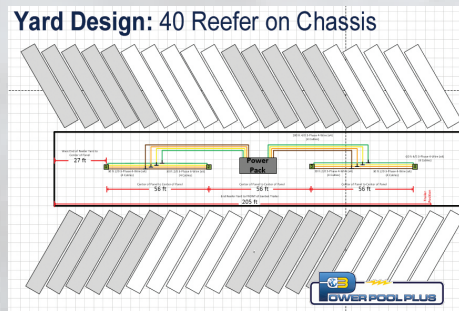

## PERFECT FOR REEFER ON CHASSIS YARDS

Reefer on chassis presents a unique challenge as plenty of linear space is required. Positioning a traditional power pack in the ideal position is anything but ideal.

**Wouldn't it be easier to have the power solution closer to the point of operation?**

The Power Pool Plus PP-400MAX Power Module eliminates long reefer extension cords to ensure a safer, more efficient work environment.

**MAXIMIZE YARD SPACE.  
MAXIMIZE POWER DISTRIBUTION.**

## SPREAD THE LOAD

Use the PP400MAX to spread the load efficiently.

Position reefer stacks where you want them; adjust the receptacle trees nearby each stack, yet at a distance from the power module.

Increase capacity by adding multiple power modules for seasonal spikes in reefer cargo.
