Purpose Built Power Generation Solutions

ONE-OF-A-KIND CUSTOM POWER SOLUTIONS BUILT TO SPEC!

Your operation is unique, your equipment should be too. At Power Pool Plus, we believe in formatting your reefer power solution around your existing requirements, maximizing efficiency and cost effectiveness. Each unit we create is **Purpose Built** according to four specific elements: The **Application** of the Power Pack, the **Environment** it will be subjected to, the **Safety** of those who operate it, and the **Time Frame** in which it is expected to perform. You can be sure that every custom designed machine we produce is built to the same standard as our traditional model line, with expert craftsmanship and a rigorous attention to detail.

HIGH PLUG-COUNT UNITS

Power Packs capable of handling high reefer count can be achieved through unique design enhancements.

- Receptacle panels on sides or end frames to spread the load.
- Custom fuel tank designs and capacities.
- Breaker connections to remote receptacle trees.
- Unique louver placement & design to address special applications.
- On-board storage racks for remote 8-plug trees and cables.
- Dual engines with fail-over switch gear.

REEFER YARD DESIGN

In addition to providing the necessary equipment, our team will gladly assist you in transforming an empty yard without the proper infrastructure into a lucrative reefer cargo operation. Power Pool Plus has over three decades of experience in accommodating expansive reefer yard projects, some requiring massive layouts spanning over 500 feet from a single power source, with applications to power 350+ refrigerated loads.

AUXILIARY POWER CAPABLE

Our custom Power Packs are capable of providing auxiliary power when properly equipped. Exterior or interior mounted connections alongside reefer plug receptacles will ensure your operation is ready for anything in case of a severe weather event or anything else that could cause a power outage.

UNMANNED BARGE USE

Power Pool Plus has extensive experience constructing Purpose Built Power Packs designed to travel from port to port. Our proven dual-engine designs offer trusted engine failover switching to ensure consistent reefer power, providing the peace of mind that comes from knowing your perishable cargo will arrive intact. Ask about our state-of-the-art automatic CO2 fire suppression system, designed to mitigate maritime accidents, as well as our tropical coating solution to minimize salt water corrosion of your unit.
