Purpose Built Power Generation Solutions

REFURBISHED

**RELIABLE & COST EFFECTIVE
REEFER POWER!**

Power Packs are utilized in some of the harshest environments and exposed to some of the toughest elements – tropical heat, saltwater, freezing temperatures and more! There eventually comes a time when even well maintained machines need replacement. With the right evaluation and attention to detail, your existing Power Pack may be re-manufactured to like-new condition at a cost far less than purchasing new! Our team can re-manufacture tired, worn or damaged Power Packs of any make or model. From blown engines to damaged receptacle panels, we will work within your budget requirements to professionally re-build your existing machine into like-new condition while saving both time and money!

BEAT THE ELEMENTS WITH TROPICAL COATING!

If your Power Pack will regularly be subjected to harsh maritime elements at port or at sea, we highly recommend our optional tropical coating package! This physically drying high build paint is specifically designed to withstand corrosive salt water, better preserving the structural integrity of your Power Pack enclosure over time and enhancing the longevity of your investment!

We offer *rental units* to reduce operational downtime while we refurbish your Power Pack!

REFURBISHED ENGINE PROGRAM

In addition to refurbishing existing Power Packs, Power Pool Plus is now offering complete refurbished engine builds for a fraction of the cost and time it takes to construct a brand new unit! Our team can either source a lightly used diesel power plant, or use one you have on hand to construct a complete Power Pack around. We are able to utilize a variety of engine makes and sizes to create a custom build tailored to your operation!
